Project Manual

We wanted to tackle the problem of the copy speed so we integrated two methods into our project.

Pop up clipboard

A mini clipboard appears as soon as an icon is dragged for copy. The pop up clipboard appears right beside the dragged icon. The icon can be dropped into the mini clipboard which will in turn transfer the icon to the main clipboard.

Scribble gesture

As per Dr. Wael's suggestion we implemented a simple gesture that would transfer the icon directly to the clipboard. We defined a new gesture called the scribble gesture, which requires the user to pass the mouse over the icon twice (as shown below) for it to be recognized.
